## Karaoke iOS & Android App

March 01, 2017

### Overview / Specifications

To create an app with all the following functionality for iOS and Android smartphones with Web-based super admin.

### Features & Functionality karaoke App Interface

NOTE -Presuming we get the songs database with API access & with just the following features

- User profiles ( name, email, city state, country)
- search user's ( name or email or random)
- Connect with users ( other users whom you have sang songs with or friends)
- Chose a genre then a song and then sing solo or invite someone to sing that same song as a duet.  
Each user who starts a karaoke singing session has the ability to record, save and share via social media but they also have the ability to filter their video image while singing so that others don't see exactly what they look like. ( there is an open source for video filtering.

## Features & Functionality Admin Web Interface

Super admin web based interface can Add or Remove accounts

Run & View user reports based on name, email address, date(s), song(s), location ( city or country)

## Time lines

4 weeks - Design - 1 Designer
